

Role Details: Role: PKI Engineer / Technical Support Engineer

Experience: 2 Years to 5 Years

Industry: IT Services & Consulting

Employment Type: Full-Time, Permanent

Education: B.Tech or B.E. in Computer Science / Information Technology / Electronic & Computer Engineering

Location: Andheri (West), Mumbai

Working Days: 6 Days, i.e., Monday to Friday (WFO) & Saturday (WFH)

About the Role:

We are a cybersecurity service provider specializing in Certificate Lifecycle Management (CLM) and SSL/TLS solutions. We are looking for a PKI Engineer / Technical Support Engineer who will support, assist, and guide enterprise customers across the complete certificate lifecycle.

This is a hands-on, customer-facing technical role where you will work directly with client environments, supporting Public CA SSL certificates, Private CA (Microsoft AD CS), and certificate automation using CLM platforms. The role requires strong PKI fundamentals, troubleshooting skills, and the ability to work across diverse enterprise environments.

Key Responsibilities:

Technical Support & Operations

- Provide technical support and operational assistance for:
- SSL/TLS certificate issuance, renewal, and replacement
- Certificate lifecycle management using CLM platforms
- Support enterprise customers using Public Certificate Authorities and Private CA infrastructures

Certificate Lifecycle Management

- Assist customers with end-to-end certificate lifecycle operations, including:
- CSR generation
- Certificate validation
- Certificate installation and deployment across environments

Platform & Environment Support

- Support and troubleshooting certificate deployment on:
- Web servers: Apache, NGINX, IIS
- Hosting platforms: cPanel, Plesk, and similar
- Network devices: Firewalls, WAFs, Load Balancers

Microsoft AD CS Support

- Assist customers with Microsoft Active Directory Certificate Services (AD CS), including:
- Understanding certificate templates and enrollment processes
- Requesting, renewing, and validating certificates

Automation & Integrations

- Support certificate automation and integrations using:
- CLM platforms such as Venafi, AppViewX, or similar tools
- CI/CD pipelines and GitHub-based workflows

Cloud & Container Environments

- Assist with certificate deployment in:
- Kubernetes
- Docker
- Cloud-native and containerized environments

Troubleshooting & Documentation

- Troubleshoot SSL/TLS issues related to: Trust chains, Certificate expiry, TLS handshake, or configuration errors

Create and maintain

- Customer-facing documentation
- SOPs
- Knowledge base Articles

Work closely with internal engineering and sales teams to support

- Customer onboarding
- Migrations
- Production rollouts

Required Skills & Experience

Technical Skills

- Preferred / Added Advantage
 - Experience working with Hardware Security Modules (HSMs)
 - Exposure to: Cloud platforms (AWS, Azure, GCP) and DevOps and CI/CD pipelines
- Experience supporting enterprise customers or working in a managed services/service provider environment

Soft Skills

- Strong customer-facing communication skills
- Ability to explain complex PKI concepts in a simple and clear manner
- Strong analytical and problem-solving abilities
- Good documentation and reporting skills
- Ability to manage multiple customer engagements simultaneously

Why Join Us?

- Work with diverse enterprise customers across multiple industries
- Gain deep hands-on experience in CLM, PKI automation, and SSL/TLS
- Exposure to complex, real-world PKI environments
- An opportunity to grow your career in enterprise security and cybersecurity services
