DevOps Engineer | AWS | Linux | CI/CD | Docker | Kubernetes | Jenkins

PROFESSIONAL SUMMARY

Results-driven IT professional with 3+ years of experience in Linux/TecOps engineering, now transitioning into a full-time DevOps role. Hands-on expertise in AWS cloud infrastructure, CI/CD pipelines using Jenkins, containerization with Docker, and Kubernetes orchestration. Proven track record managing production trading platforms, driving automation, and supporting high-availability environments. Eager to leverage strong infrastructure knowledge and DevOps skills to deliver faster, more reliable software delivery pipelines.

TECHNICAL SKILLS

Cloud & Infrastructure: AWS (EC2, EBS, ELB, VPC, IAM, CloudFront, CloudWatch, Route 53, S3, ECS, EKS, Fargate, AMI)

CI/CD & Automation: Jenkins (Job creation, Build & Deployment Automation), Git, GitHub (Branching, Merging)

Containerization: Docker (Dockerfile, Image Build, Container Management), Kubernetes (Minikube, Pods, Deployments, Services)

Linux Administration: RHEL, CentOS, Ubuntu, SUSE — User Admin, LVM, File Systems, Crontab, Shell Scripting

Web & App Servers: Apache, Nginx, Tomcat, IIS, Redis, MySQL

Security & Networking: SSH, FTP/SFTP, SSL, SE-Linux, ACL, VPN, OpenSSL, Security Groups

Monitoring: Amazon CloudWatch, ManageEngine Application Manager

Database: MySQL (Backup/Restore, SQL Queries for Validation & Troubleshooting)

Scripting: Bash Shell Scripting (Log Transfer, User Mgmt, Automation)

Tools: PuTTY, WinSCP, SCP, Rsync, YUM, RPM, curl, wget, grep, netstat

WORK EXPERIENCE

Linux / TecOps Engineer | YES Securities

2022 – Present

DevOps & Deployment (Key Contributions)

- Managed end-to-end deployment workflows across UAT, CUG, and Production environments for trading platforms, including release validation and rollback procedures
- Automated application deployments and service upgrades, reducing manual intervention and deployment time
- Wrote and maintained shell scripts for log transfer, user provisioning, and scheduled automation tasks using crontab
- Managed Docker containers and maintained container lifecycle for application services
- Provisioned and administered AWS resources including EC2, EBS, ELB, VPC, IAM roles, CloudFront CDN, and Route 53 DNS
- Created and managed AMI snapshots and volumes; performed resource scaling (CPU, memory, EBS) based on demand
- Configured and maintained Jenkins pipelines for build and deployment automation
- Managed Git repositories including branching strategies, merging, and version control workflows

Linux Administration & Operations

- Administered Linux servers (RHEL, CentOS, Ubuntu) including OS installation, configuration, user management, and performance tuning
- Monitored system health, application performance, and trading activities to ensure high availability and minimal downtime using CloudWatch and ManageEngine

- Led incident management and conducted Root Cause Analysis (RCA) for critical production issues, documenting SOPs and resolution guides
- Implemented and maintained network services: Apache, Nginx, Tomcat, Redis, MySQL, FTP, SFTP, NTP, SSH, Telnet
- Coordinated with security teams to apply vulnerability patches, hardening configurations, and ensure compliance with security standards
- Performed database management: MySQL backup/restore (dumps), SQL queries for data validation and troubleshooting
- Managed LVM (create/extend/reduce logical volumes) and file system operations (Ext2/Ext3/Ext4), mounting and unmounting
- Transferred files across systems using FTP, WinSCP, SCP, and Rsync; handled file encryption/decryption with OpenSSL
- Executed remote administration via SSH, Console, and RDP; managed packages with YUM and RPM

DEVOPS PROJECTS & SELF-LEARNING

- Built and deployed multi-container applications using Docker Compose with custom Dockerfiles and image optimization
- Set up local Kubernetes cluster using Minikube; deployed pods, services, and managed deployments with kubectl
- Created Jenkins CI/CD pipeline for automated build, test, and deploy stages integrated with GitHub repositories
- Hands-on practice with AWS ECS and EKS for container-based deployments using Fargate launch type
- Implemented VPC subnets and ACL rules to secure multi-tier architecture and block suspicious IP ranges

EDUCATION

Bachelor's Degree / Diploma in IT/Computer Science
Mumbai, Maharashtra

CERTIFICATIONS & LEARNING

- AWS Certified Solutions Architect – Associate (In Progress / Completed)
- Docker & Kubernetes – Hands-on Labs (Udemy / Self-study)
- Jenkins CI/CD Pipeline – Practical Training
- Linux Administration – Red Hat Certified System Administrator (RHCSA) concepts

KEY STRENGTHS

- Quick learner who adapts to new DevOps tools and technologies with minimal ramp-up time
- Strong bridge between traditional Linux administration and modern DevOps practices
- Experienced in high-pressure production environments requiring 24/7 reliability (financial trading platforms)
- Systematic documentation approach — SOPs, runbooks, deployment guides
