

Abhishek Veeramalla

Senior DevOps Engineer

Professional Summary

DevOps Engineer with 4 years of experience building cloud-native platforms, improving developer productivity, and driving reliability initiatives across Kubernetes and AWS environments.

Career Highlights

- Reduced deployment lead time by over 80% through automation initiatives.
- Standardized Kubernetes deployment patterns across multiple engineering teams.
- Led cloud optimization efforts resulting in significant infrastructure savings.
- Improved operational efficiency through observability and automation investments.

Technical Skills

AWS, Kubernetes, Docker, Terraform, ArgoCD, GitHub Actions, Jenkins, Linux, Python, OpenTelemetry, Prometheus, Grafana

Professional Experience

Senior DevOps Engineer | CloudSphere Technologies | 2024 - Present

- Led the implementation of GitOps-based deployment workflows using Kubernetes and ArgoCD, improving deployment consistency and auditability across environments.
- Designed reusable infrastructure and deployment templates that accelerated onboarding of new applications while maintaining compliance standards.
- Built end-to-end observability solutions integrating metrics, logs, and traces to improve troubleshooting and operational visibility.
- Partnered with application teams and architects to improve platform scalability, reliability, and operational readiness.
- Implemented governance practices using Terraform and AWS controls across multiple cloud environments.
- Led cloud optimization initiatives involving rightsizing, automation, and resource governance to improve cost efficiency.
- Developed self-service infrastructure workflows enabling engineering teams to provision resources independently.
- Introduced deployment validation gates and automated quality checks within CI/CD pipelines.
- Mentored junior engineers on Kubernetes operations, Infrastructure as Code, observability, and production troubleshooting.

- Contributed to platform engineering initiatives focused on improving developer experience and deployment velocity.

Associate DevOps Engineer | NextGen Digital Systems | 2022 - 2024

- Managed AWS infrastructure supporting large-scale production applications and business-critical services.
- Built Infrastructure as Code solutions using Terraform, enabling repeatable and standardized environment provisioning.
- Designed and maintained CI/CD pipelines automating build, testing, and deployment workflows.
- Supported Kubernetes clusters hosting multiple production applications and microservices.
- Implemented monitoring, logging, and alerting frameworks to improve operational visibility.
- Participated in cloud migration and modernization initiatives for legacy applications.
- Worked on disaster recovery planning, backup automation, and resilience improvements.
- Collaborated with development teams to improve deployment practices and cloud adoption.
- Investigated recurring operational issues and implemented automation-based solutions.
- Contributed to engineering enablement through documentation, onboarding support, and knowledge-sharing sessions.

Certifications

- AWS Solutions Architect Associate
- Certified Kubernetes Administrator (CKA)
- HashiCorp Terraform Associate
